

# uWin<sup>08</sup> Programming Editor Database Management

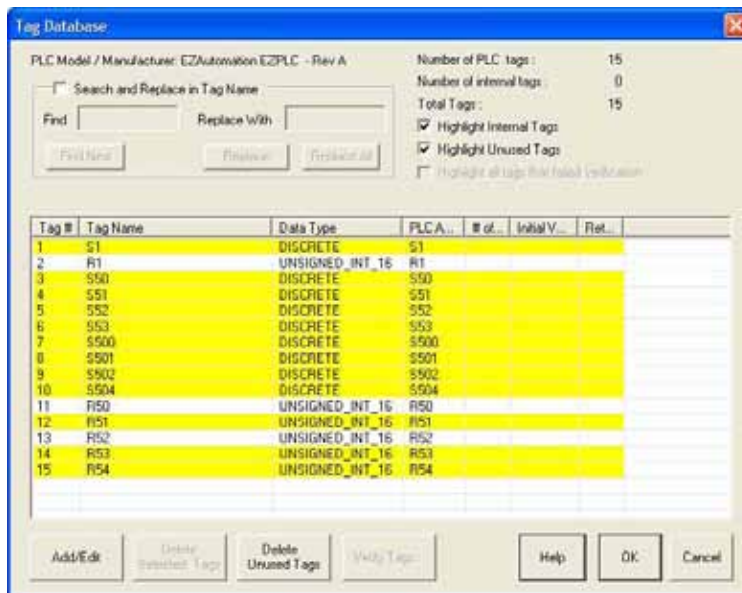

## Import / Export of Tag Database

uWin<sup>08</sup> programming software allows both import and export of tag database from and to an X-cel sheet. This saves a tremendous amount of time when developing PLC software using the same tag names.

***The enhanced ability of Import/Exporting the tag database, Highlighting the unused tags, and Instant Syntax checking makes it extremely convenient for the programmer to manage his/her project.***

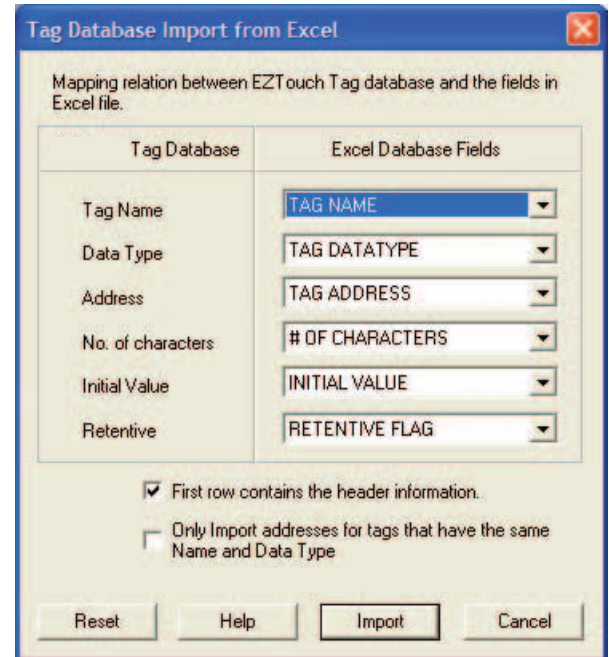

## High-light Unused Tags

The Tags in the uWin<sup>08</sup> Software can easily be sorted by name, by type and by PLC address. On top of that you can high-light unused tags in yellow to wake it simple on the programmer to manage his/her project.

## Instant Syntax Checking

The uWin<sup>08</sup> software is unique in that, it checks the address syntax of all the PLCs and PLC Networks supported, before the address is allowed to be entered. This feature saves a tremendous amount of time in implementing an HMI PLC Project. **You find you errors at the time of making the error not when you are finished and saving or downloading the project.**

...in line with continuous improvement of already the most intuitive to program software for PLC Touch Panels.
