Display of Tag Addresses on Objects

The PLC addressing uses Tag names, so that you can associate meaningful, easy-to-remember names to the addresses. Additionally tags are useful if you use different PLCs with the same HMI program. You will only need to design the HMI program once. Then just change the tag definitions to match the the PLC you are using.

The enhanced ability to display tag addresses on the objects allows simpler screen development and troubleshooting. Here we are showing the tag address for block transfer on AB's Remote I/O.

Pick and Apply Styles...

When designing screens, there are many attributes assigned to objects, such as object's colors, object's shapes, text sizes, text colors. All these details in completing a style for the screen takes a great deal of time. This feature allows the ability to "copy and paste" these styles from one object to as many as you select. Another wonderful time saving feature!

The object's style that was picked has now been applied to the other objects

Pick the object that has the style you want to copy

Select all the objects where you want the style to apply

...in line with continuous improvement of already the most intuitive to program software, for PLC Toughpanels.
