

Unique Features

Password Protection

The EZSeries offers comprehensive alarming tools, allowing you to trigger alarms based on events (Bits) and values (registers), with the values being monitored for a variety of conditions (in/out of range). The alarm history also stores details and counts and all this information can be printed or logged. Also the EZSeries offers the flexibility of not only password protecting your alarms but also every object.

"

"

" Eight levels of password security for every input object.
